8000ST8	torque wrench with setting scale – automatic triggering	1/1

Accuracy: ± 3 % of indicated

Version: Robust torque wrench, adjustable with micrometer scale, with protection against accidental changes to the setting. Integral ratchet to accept sockets. Size 20 – with reversible ratchet and fixed square drive pin – only for right-hand tightening.

Function: On reaching the set torque value the wrench triggers "indicating" (audibly and perceptible) and is then again immediately ready for use.

Application: For controlled tightening of screws to pre-set torque.

8000ST8, torque wrench with setting scale		
size = maximum torque	Nm	20
Tightening value (scale range)	Nm	4-20
Scale graduation, 1 graduation =	Nm	0,1
Overall length	mm	230
Weight	kg	0,4
Square drive inch	inch	1/4"

8149KU	double excenter sleeve for shower door hinge Flinter, as well as for all fixations with glass drilling Ø 16mm and stud Ø 9mm	1/1

The double excenter sleeves permit a better centering and fixation of the shower door hinge in the glass drilling.

Even a small collection takes a giant show

Maintaining the transparent character of glass takes discreet binders. They are based on the easy and at the same sophisticated principle of form and function, get the bathroom going and can be used as shelf or a place to put something.

It is recommended to refer to the maximum load capacity. Point of breaking is significantly higher than recommended. Extending the shelves is completely unproblematic. Please note the maximum measurement max. a.

accessories – glass panel

remarks for all bended glass:

tolerance:

- dimension tolerances = ± 2 mm per running meter
- backfill (twisting) = max. ± 3 mm per running meter
- height of edge deflection = max. ± 3 mm per running meter
- deviation from contour exactness = max. ± 3 mm per running meter
- bulges in edge developing zone are possible

aelotropy:

Aelotropy occurs during thermal loading process of glass. Different voltage zones lead to the compound fraction of the light beam. Only the polarized parts of the day light make through spectral coloured annuli, cloud images and similar this appearance visible. These appearances are due to production process and therefore not a reason for rejection.
